Subject: Application for Cloud Application Consultant Role

• [LinkedIn](#)

Dear Hiring Team,

• [GitHub](#)

I'm reaching out to express my interest in the Entry-Level position for Cloud Application Consultant role at IBM. As a Cloud Architect and DevOps Engineer intern at Intellipaat Software Solutions, I have honed my skills in Cloud technologies and CI/CD pipeline implementation on Jenkins and AWS services like CodeCommit, CodeBuild, and CodeDeploy for seamless software delivery.

My expertise spans with the good understanding of AWS cloud and its service models like IaaS, PaaS and SaaS, I have a decent work experience in cloud technologies that I firmly believe that can benefit IBM, plus tools I know in DevOps culture could prove a added flavour to the position I would be working at. Notably, I have designed serverless architectures with AWS Lambda a serverless compute (PaaS), demonstrating adaptability and innovative problem-solving.

"I'm particularly proud of being selected for a Master's program at a prestigious German university. However, due to financial constraints, I had to forgo this opportunity. Despite hustling for property mortgage troubles for almost two years in 2022 and 2023 to manage the financial issue, I ultimately had to make the difficult decision to forego pursuing the program. Nevertheless, I have remained determined and focused on advancing my skills in Cloud computing and DevOps."

I'm driven by learning and adapting quickly, keeping pace with industry trends to contribute effectively to IBM's dynamic team. The company's commitment to excellence, is always evidenced, resonates with my own values of delivering quality results.

I just want a single opportunity to present myself. "I am committed to contributing 110% to IBM's success and am eager to discuss how my expertise and enthusiasm can benefit with the company's objectives."

Sincerely,

RITESH SAMBHE
